

Consumers all over the world know that olive oil comes in many different qualities. Olive oil producers know that there are just as many differences in the quality of the equipment available for processing the olives.

Alfa Laval in brief

Alfa Laval is a leading global provider of specialized products and engineered solutions.

Our equipment, systems and services are dedicated to helping customers to optimize the performance of their processes. Time and time again.

We help our customers to heat, cool, separate and transport products such as oil, water, chemicals, beverages, foodstuffs, starch and pharmaceuticals.

Our worldwide organization works closely with customers in almost 100 countries to help them stay ahead.

How to contact Alfa Laval

Contact details for all countries are continually updated on our website. Please visit www.alfalaval.com to access the information.

Experts know the real difference

Olive oil is a delicate product. Discerning users in industry and catering, as well as domestic consumers, are quick to notice and appreciate good quality. For lasting commercial success, taste and a wide range of other key characteristics all have to be just right, and consistently so.

Alfa Laval makes it possible to achieve efficient, top-class results that your customers can rely on to maintain the desired quality standards, time and time again.

Producing consistently better olive oil
Producing olive oil is part of a time-honoured tradition where individual skills and experience make a crucial difference.

Alfa Laval technology helps you take full advantage of those skills, with expertly designed equipment that makes good olive oil better – consistently.

Quite simply, if you are aiming at producing the best virgin and extra virgin olive oil, Alfa Laval technologies make it easier for you to achieve and maintain the consistent quality you are aiming for. To obtain the best prices and keep a good grip on market share for exported olive oil, you must be able to provide your customers with consistent, reliable quality.

And if you are aiming at mass markets where prices are lower, it is essential to keep production costs, down time and waste to the absolute minimum – which is where Alfa Laval technologies come in.

Technology and quality make the difference

Alfa Laval has more than seventy years of experience in separator technology. Whether your olive oil processing operation is large or small, Alfa Laval meets your unique needs.

Traditionally, processing operations have been able to choose between three different olive crushing systems:

- the traditional olive grinding mills
- the standard hammer mill – the recommended Alfa Laval solution for quality olive oil
- toothed disc crusher

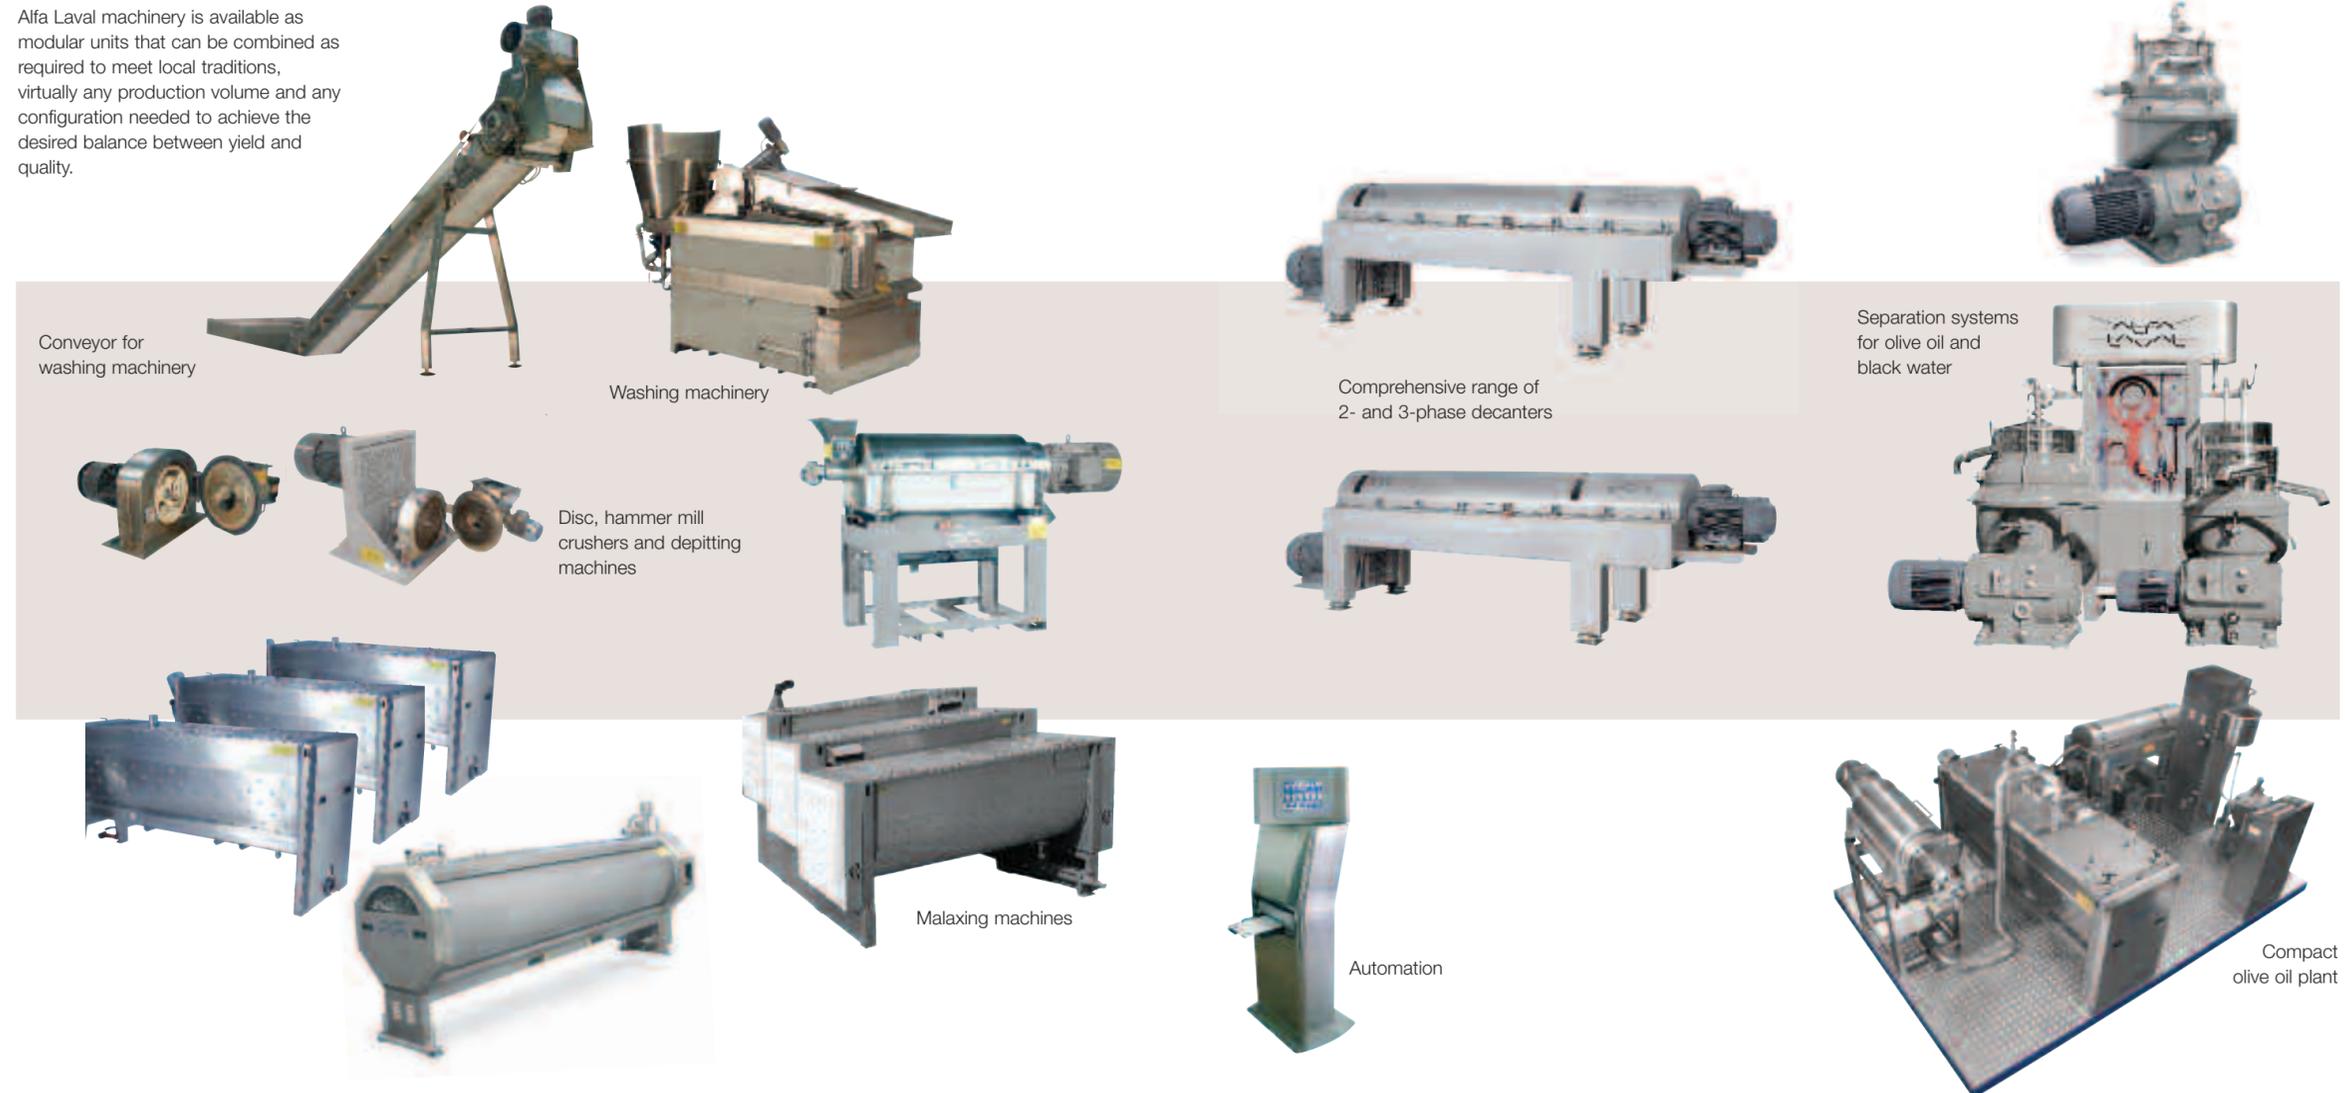

Alfa Laval technology has also made it possible to build and operate high-tech olive oil plants that make a significant difference in quality and profitability.

Alfa Laval was the company that introduced the depitting machine, a highly innovative solution that made it possible to produce extremely high-quality extra virgin olive oil from the pulp only. This has opened up completely new markets for olive oil producers – markets where profit levels are notably higher.

Efficient, flexible and reliable
All Alfa Laval machinery for the olive oil industry benefits from the company's vast experience and our ability to produce equipment that provides you with a maximum of efficiency, flexibility and reliability.

Alfa Laval machinery is available as modular units that can be combined as required to meet local traditions, virtually any production volume and any configuration needed to achieve the desired balance between yield and quality.

Conveyor for washing machinery

Washing machinery

Comprehensive range of 2- and 3-phase decanters

Separation systems for olive oil and black water

Disc, hammer mill crushers and depitting machines

Malaxing machines
